Sharan Hiremani

DevOps Engineer

linkedin.com/in/sharanrh
github.com/sharan-rh
Portfolio: Sharan-rh

SKILLS

Programming & Scripting:	Python, JavaScript, SQL, Bash Scripting, React, Node.js
Tools & Platforms:	Docker, Kubernetes, AWS, Jenkins, Ansible, Terraform, Linux, Git/GitHub, Prometheus, Grafana.
Backend & APIs:	RESTful APIs, Flask, MongoDB, Microservices.
Systems:	Linux(RHEL)/Unix, Windows, Networking (CompTia N+).
Soft Skills:	Communication, Collaboration, Troubleshooting, Continuous learning mindset.

EXPERIENCE

Junior Developer Intern

01 2025 — 01 2026

ONIR Technologies

Canada (Remote)

- Built and tested network topologies using **EVE-NG**, gaining practical exposure to networking scenarios aligned with Cisco DCAIE concepts.
- Automated infrastructure provisioning and configuration management using **Terraform** and **Ansible**, reducing manual setup effort across multiple project environments.
- Deployed containerized applications using **Docker** and managed scalable workloads through **Kubernetes**, ensuring stable and consistent builds across multiple project modules.
- Set up and worked with **TIG Stack** (Telegraf, InfluxDB, Grafana) and **ELK Stack** for system monitoring and log management, enabling early detection of performance bottlenecks during development sprints.
- Developed and maintained Python scripts to support infrastructure tasks, improving efficiency in deployment and troubleshooting workflows.
- Actively supported development, testing, and troubleshooting of software and infrastructure systems, contributing to smoother project delivery throughout the internship.

PROJECTS

Educational Platform with Complete CI/CD Pipeline

React, Node.js, AWS, Terraform, Ansible, Jenkins, Docker, Kubernetes, Prometheus, Grafana

- Developed a full-stack application with two frontend modules for Students and Teachers, a **MongoDB**-powered backend, and **Google Identity Services (OAuth 2.0 / OpenID Connect)** for user login/authorization.
- Set up a **Jenkins CI/CD pipeline** with **Master/Slave architecture** that handled automated deployments end to end, including Docker multi-stage builds and 3-tier environment promotion with manual approval gates.
- Automated infrastructure provisioning and configuration management across environments using **Ansible playbooks**, and implemented bastion host access with **SSH key automation** for secure zero-trust access.

End-to-End CI/CD Pipeline with Automated Kubernetes Scaling

GitHub, Jenkins, Docker, Kubernetes, Ngrok

- Developed an end-to-end CI/CD pipeline automating all build, test, and deployment processes for a **containerized Node.js app**, streamlining releases and minimizing manual intervention.
- Configured **Kubernetes deployments with YAML manifests**, exposing services through NodePort and implementing auto-scaling for pods based on CPU usage to maintain performance under varying loads.
- Refined the development workflow by blending **Jenkinsfile automation** and **npm audit security fixes**, maintaining secure, vulnerability-free builds in continuous integration pipelines and supporting reliable releases.

EDUCATION

KLS Gogte Institute of Technology, Belagavi, Karnataka.,

Belagavi, Karnataka

Master of Computer Applications - 7.86 CGPA

2022 - 2024

Coursework: Algorithms and Data Structures, Operating System, DBMS, Computer Networks, Maths, AI/ML, Research Methodologies

CERTIFICATIONS

- Software Programmer - Python [NASSCOM]
- Mastering Git & GitHub from Basic to Advanced
- AWS Cloud Practitioner [KodeKloud]
- Master of Network Administration (CompTia A+, N+, Windows server 2016, CCNA) [Belagavi Institute of Technology]
- Terraform Associate Certification [KodeKloud]
